

BLAST RESISTANT CONTAINERS

Blast RC-Z Std is in use around the world in post rooms and with EOD teams.

Rezizt newly launched RC-Z Blast Containers are a development going back to 1986. Our new improved winding process takes the traditional material to create a container, with lighter weight and the same performance as the early containers that are still available in the marketplace. Lower weight allows for easier manoeuvring and the smaller external dimensions take up less space.

We offer 3 standard size containers as per the table below. The standard international orange colour can be easily changed. We also allow for logo incorporation on 5+ container orders. And we have re-introduced the rolling rubber external rings that have been an important part for moving the container from one site to another.

Bin Spec	Pass level PE4 (C4)	Charge Weight	Location Bag	Base for Floor standing	Colour (others available)
RC-Z lite	228 gms	8 oz	STD	Std	Blue
RC- Z Std	500 gms	17 ½ oz	STD	Std	Orange
RC- Z Std	500 gms x 2	17 ½ oz	STD	Std	Red

The Blast Container is designed for use in an environment such as post rooms, security offices and companies where an IED threat is deemed to be likely. The base plate is for use where the floor is known to be no more than 6” of reinforced concrete.

Dimensions Int Diameter	Wall Thickness	Colour	Approx Weight	Charge Weight
ID 500mm	12mm	Blue	35 kgs	227gms
ID500mm	16mm	Orange	46 kgs	500gms
ID500mm	19mm	Red	55 kgs	500gms x 2 events

We also adapt and make litter bins with blast resistant properties. Please ask for more information.

Rezizt is the trusted brand of ballistic, blast and cut resistant materials.
