

## Blast Blankets

Rezigt newly launched Generation 2 Blast Blankets build on the success of the Generation 1 systems that have been copied but never equalled. Our new blankets utilise the next generation of aramid fabrics (Kevlar® or Twaron®), made in our own factories. We can assure customers of products that are made to the original test standards, and we also carry out stringent material batch testing. We offer standard sizes as per the table below, but we can adapt and include extra features such as magnetic strips to allow blankets to be used on steel skinned vehicles, extra Velcro loops to allow the blankets to be attached to buildings or personnel more easily.

Spec of Threat	Pass level	Density per m2 (lbs)	Containment Ring	Fire retardant	Colour (others available)
Stanag 2920	V50 400m/s	5 kg (11lbs)	STD	Option	Black
Stanag 2920	V50 500m/s	6.5kg (14lbs)	STD	Option	Black
Stanag 2920	V50 600m/s	8kg (17.6lbs)	STD	Option	Black
EN1063	FB2	4.5kg (10lbs)	No	Option	Blue
EN1063	FB4 (IIIa equal)	11kg (24.2lbs)	No	Option	Blue

The blanket is used for breaching operations, to cover IED's whilst awaiting the arrival of the EOD teams, or as a protection against unknown threats. The sizes offered can be varied but we show below the typical sizes. Please ask if you need the blankets made at a bespoke size or shape, specifically for your needs.

Standard blankets are black nylon, and each blanket comes with a 400 m/s Containment Ring (1800x400mm), as well as a carry bag.
