

## COMBAT HELMETS

The VIPER series of helmets are the latest version of the ACH (Advanced Combat Helmet) with the ability to take Side Rails and NVG Shrouds. This latest version is fitted with a 7-pad suspension system and our RD (Ratchet Dial) 4 point quick adjust harness. The Kevlar Helmet shell has a protection level of NIJ LEVEL IIIA, 0106.01.

VIPER 1 (ACH)

VIPER 2

VIPER 3

The RD (Ratchet Dial) system hugely improves the rotational stability of the helmet onto the head, which is important for mounted NVG's. The operator can easily adjust the tension of the anti-rotation wires by means of a dial which controls the circumferential straps of the harness from the back of the head.

This RD system has been designed and manufactured specifically for our helmets to withstand the harsh environments that the helmets experience. In addition to the RD system, it has four quick adjust buckles that make the strap tensions on the helmet easy to adjust for the wearer while the helmet is on the head.

The NVG shroud is manufactured from high impact composite nylon with an aircraft aluminium CNC machined insert, that the NVG bracket mounts onto. This ensures very tight dimensional tolerances, which stabilise the NVG mount.

The rails are designed and manufactured from high impact composite nylon and come with two Picatinny rails, two general-purpose rails and two goggle clips. In addition, the rails can take a large variety of other accessories such as visor mounts. This helmet is very popular with Special Forces, Militaries and Police Forces / Law Enforcement Units due to its unusually advanced comfort and flexibility in extreme conditions.

Viper Helmet with optional cover

Helmet Sizes (Diameter)			
Small	Medium	Large	Extra Large
51-55cm	54-59cm	57-62cm	60-64cm

## Available colours
